

UPGRADE PROCESS

1 Extension List

In order to provide you with a fixed-price quote, we need to know which extensions are installed in your system and their current versions. If you're unsure how to send us this information, please click here: <https://www.t3-upgrades/get-extensions-list/>

2 Free Estimation

Based on the information received, we will send you a personalized fixed estimate for the upgrade.

Data privacy and security are fundamental to us.

3 Preparation

To perform the upgrade, we require access to your website's code and a database dump.

4 Upgrade

We will carry out the upgrade in a local development environment and prepare it for testing.

Feel free to modify the content!
THERE IS NO "EDITING STOP"

5 Testing

You can test the upgraded version on a staging domain to ensure everything functions as expected. If you don't have your own staging domain, we can provide one where we will install the solution.

Deployment typically results in LESS THAN 5 MINUTES of downtime.

6 Deployment

Once we have thoroughly tested everything, we will hand over the code or perform the installation on your original server.
